ABSTRACT

Tone, a divergent feature of the text, sets the readers' mood in which writers confide their writing styles and convey copious of the cultural background of the community to which they belong. Even in the world's preceding advancement, the emergence of Artificial Intelligence, empirical analysis of tone in written texts has limited literature in the field; hence the motivation of the researcher to look at the tone of the press release as it is the new face of public relations. The nature of the study is Intercultural Rhetoric (IR)/Contrastive Rhetoric (CR), the study of written discourse between and among individuals with different cultural backgrounds. The study used quantitative and qualitative approaches as they complement the richness of the study. The gathered press release headlines of UNICEF written by authors from varied discourse communities, namely the Philippines, Thailand, and the United States of America, had gone through content analysis and discovered the ingenuity and inspiration in their word selection in writing headlines, hence the tone. The headlines of the Philippines

were analyzed for having a committed tone and logical and analytical attitude. Interestingly, the headlines of Thailand have a committed tone as well. On the other hand, headlines in the USA have a neutral tone.

Keywords — Intercultural Rhetoric, Tone, Content Analysis, World Englishes, Press release, Philippines

INTRODUCTION

Intercultural Rhetoric studies play an important role in helping students, teachers, and scholars understand and navigate the complexities of writing in different languages and cultures, which provides an opportunity to provide frameworks for written text assessments, especially in the emergence of modern language tools such as the Artificial Intelligence (AI) through its subfield, Natural Language Processing (NLP). The field examines the differences in rhetorical conventions, cultural values, and writing processes across languages and cultures. By comparing and contrasting writing practices in different contexts, IR studies help writers understand how to communicate effectively with audiences from different cultures. Coined after Robert Kaplan, he argued that writing in a second language involves more than just mastering grammar and vocabulary; it also requires understanding cultural differences in rhetorical conventions and discourse patterns. As an evolving field that continues to grow and develop in response to changing social, political, and technological contexts, some of the recent developments in the field focus on digital communication. As more communication takes place online and through digital media, it is a generous avenue of text resources for the exploration of variation and similarities. According to Scolloon (2000), a recurrent problem in contrastive studies of texts is determining how much variation between one text and another is sufficient to determine that the two are different texts. This paper is the analysis of the tone in press release headlines; tone can be subjective and influenced by the cultural context in which the language is used. The tone is an important aspect of the communication process, as it can influence how readers perceive and interpret the information presented. Tone refers to the emotional or attitudinal aspect of language use (Patterson, 2014) and can be conveyed through word choice, sentence structure, and other linguistic features. Determining the tone of written text from different cultures can be challenging, as the cultural context and linguistic nuances may be distinct. It includes the genre and context of the writing, the uniqueness of linguistic features, and the cultural context.

Online press release, like traditional ones, is the new face of public relations. In any institution, press releases are very essential as they continuously boost the reputation and digital assets, big and small, private or government, and even non-profit organizations. They remain visible permanently on search engines and websites. It also affects brand value by reaching out to consumers and target groups across all search engines. Having its importance in the business industries worldwide, the Reuters Journalism Research Institute of Oxford University found out that online publications rank first with 87% among the most preferred media as a news source by the internet user in Turkey. The online press release is a site with vast and varied scopes of social, institutional, and cultural discourse communities whose writing panaches can be experienced and utilized for contrastive studies. The online press release has emerged as part of the rise of new news stories on the World Wide Web in the rise of the new industrial revolution. A press release published online helps institutions and organizations reach their target audiences at the right time and place and offer themselves among researchers for possible opulent constructive rhetoric studies. A limited number of research uses online press releases as corpus. The American Sociological Association (ASA) defines a Press release as a short article written in style similar to a news story. News stories have been used in contrastive discourse studies like the study of Scollon (2000), who conducted a contrastive discourse study of five days' newspapers and Genre(less) and purpose(less) and the online news galleries by Caple. In addition, news stories also bring about compelling academic articles and reports in different fields, such as the business industries.

UNICEF, also known as the United Nations Children's Fund, was established on December 11, 1946, and it is tasked with assisting children all over the world with humanitarian and developmental needs. With a presence in 192 nations and territories, the organization is one of the world's most well-known and well-recognized social welfare organizations, but the U.N. The main Press Center is located in New York City, where the headquarters are. The activities of UNICEF include administering immunizations and disease prevention, treating mothers and children who have HIV, enhancing maternal and childhood nutrition, enhancing sanitation, promoting education, and offering emergency relief in disasters. UNICEF is a non-profit organization that has subsidiaries in each country. The UNICEF Press Centre in each subsidiary has the latest press releases, official statements, expert sources, and the like. These press releases are written by local authors whose target readers are natives from the same country. Using online corpora such as the UNICEF online press release in contrastive rhetoric

studies allows researchers to examine language use in a more authentic and relevant context and can provide important insights into how culture, language, and communication practices intersect the digital age.

FRAMEWORK

Scollon (2000) strongly emphasized on the use of professional communication between members of various groups, particularly but not limited to face-to-face during speech events like meetings, conversations, or interviews, or in other words, when people are interacting socially with one another. Their main objective is to build the vocabulary and concepts required for an easy-to-understand analysis of intercultural communication. Tone is paramount in the oral discourse, as many researches posit that the meaning of a message is perceived by tone. In the foregoing advancement of the world, *the tone* in a text has limited literature in the field.

Tone sets the readers' mood in which the writers confide their styles in writing and tell much of their cultural background where they belong. Scollon (2000) describes *the tone*, as in the headlines, ranging from neutral to committed, from condemnatory to very upbeat. In some cases, it might be called "human interest" because the story seeks to convey the emotional impact of events upon the newsmakers or the readers. Moreover, *the tone* is one of the significant variations Scollon (2000) analyzed in his study. Analyzing the *tone* of the text can cause some gradation among these categories. For example, the matter of *tone* is most often conveyed through the choice of words, but it is quite likely that using different textual frames would produce a rather different tone in a news story. Scollon's (2000) study aimed to analyze these variables, which aimed to isolate the features that might be useful in making generic categorizations of news stories.

Press releases differ in a number of ways that almost certainly reflect the writers', sub-editors, or editors' intention to say something different to their presumed target audiences. The tone is one of them. The contrastive analysis concentrated on the written texts' tones, such as those in the headlines, which could range from neutral to committed, from condemnatory to extremely upbeat Scollon (2007). The story attempts to convey the emotional impact of events upon the newsmakers or the readers, which is why it may be referred to as "human interest" in some cases.

OBJECTIVES OF THE STUDY

The empirical systematic inquiry of Intercultural Rhetoric through the lenses of discourse analysis is concerned primarily with interpretations based on both the details of the message itself and contextual knowledge. Specifically, the study sought to the following objectives (1) determine the tone of the press release headlines from different linguistic communities, namely (a) the Philippines, (b) Thailand, and c) the United States of America, (2) determine how the tone analyzed from this press release headlines serves as variation among these press release headlines, and (3) determine how does the cultural context of the Philippines, Thailand, and the United States of America influence the tone and language used in press release headlines.

METHODOLOGY

Research Design

The nature of the study is on Intercultural Rhetoric (IR) or Contrastive Rhetoric (CR), the study of written discourse between and among individuals with different cultural backgrounds. It used both quantitative and qualitative approaches. Conrad (2002) further elaborates on the combination of both techniques as they complement the richness of the study. A quantitative study allows the researcher to recognize patterns of language use, whether a phenomenon is common or unusual, and qualitative techniques as tied to functional interpretations of language patterns to have deepened understanding of the language phenomena.

The paper used content analysis as a method that focuses on the systematic analysis of the content of the communication. It involves identifying and categorizing specific elements of communication, such as words, phrases, or themes, to draw inferences about the meaning or significance of the communication but not deviant from the theoretical theme utilized. Content analysis is often used to analyze large amounts of text, such as newspaper articles or social media posts. The researcher used Research and Method Triangulation techniques to verify and cross-check the findings and enhance the validity and reliability of the analysis of the study. A colleague was asked to verify the findings of the analysis and an Artificial Intelligence tool that detects tone in the text.

Corpus of the Study

A total 60 latest press releases were sourced from the Press center of UNICEF from November 2019 to October 2020. Twenty press releases were taken from each country, Philippines, Thailand, and USA: English written text written by three different linguistic profiles writing for specific audiences. It is believed that stories such as these appear to provide an ideal site in which to study audience design (Bell, 1984) or what Duranti and Goodwin (1992) have called *recipient design*. That is to say since the stories derive from the same news organization and may be presumed to have clear and unified informational goals (Wang, 1993). It might be presumed that the differences in these stories will reflect the news organization's intentions. For this study, the tone of the written text is assumed to reach significantly different audiences, UNICEF Filipino readers, UNICEF Thai readers, and UNICEF American readers.

The sources of corpora belonged to different linguistic environments. The spread of the English language, whether that was caused by the promotional efforts of the United States and Britain or bottom-up factors, in particular, the demand for English arising from individual perceptions that its acquisition would be economically and educationally advantageous, had caused different impacts to certain countries.

The English language has a long and complex history in the Philippines. It was first spoken in the country in 1901. Since then, it has been adopted as a language of instruction in schools. It ingrained itself firmly into Philippine culture. Language proficiency is another of the nation's assets that has boosted economic growth and made the Philippines the world's top location for voice outsourcing, surpassing India in 2012 (Cabigon, 2015). Over the years, despite the numerous shifts in the educational policies of the government, the role of English within the local educational system has remained largely constant. Since the 1935 constitution, English has been designated the official language of the islands and has been used as a medium of instruction across all levels. Such a divide in the allocation of subject areas for both English and Filipino effectively splits the functions of the two languages into two – the former for more global purposes and the latter for more local ones (Mahboob & Cruz, 2013). To this day, English is the language used in boardrooms and courthouses, in mass media, and institutions of higher learning. Despite being a former colony of the United States, the Philippines has retained a unique version of English that is heavily influenced by local languages, such as Tagalog, and the country's culture and customs. This has led to the development of a distinct variety of English, known as Philippine English, which has its grammar, vocabulary, and pronunciation.

On one hand, the English language has become increasingly important in Thailand in recent years as the country seeks to modernize its economy and increase its competitiveness in the global marketplace. English is now taught in schools across the country, and there is a growing demand for English language instruction in both the private and public sectors. However, Thailand's history with the English language has been somewhat complicated. The country was never colonized by a Western power, and so the adoption of English was largely voluntary. The first English language schools were established in the late 19th century, but it wasn't until the 1980s that English became a required subject in schools. Finally, English is the official language of the United States and the country's most widely spoken language. Since its founding, it has been the dominant language in the US and is the primary language of government, business, and education. With the strong status of the language in the country, it has evolved, influenced by the many different cultures and languages that have shaped the country's history. American English has its unique vocabulary, pronunciation, and grammar, distinct from other varieties of English spoken around the world. The USA is the third nation from which the corpus was taken. It is a part of the Inner Circle where English is used as a first language (also known as L1 or "mother tongue"). Australia and the United States are two examples of inner-circle nations. These countries are also "norm" providers in speaking the English language; however, varieties of English are also observed from one state to another.

These corpora, which came from three different discourse communities, are presupposed to qualify the contrastive study criteria. Intercultural communication and contrastive discourse studies are based on finding and analyzing cases of the same textual genre that differ only in certain features (Scollon, 1997). The study will analyze English written texts that came from three different linguistic communities, and the point of categorization was based on the model of Kachru in 1988.

Data Analysis

To determine the tone in a written text is to analyze the authors' words and language. This language style reflects the culture governing the writers and their orientation.

Table 1. Tone as presented by Scollon (2000)

Tone	Description
Committed	A writer's reasoning and analytical attitude about things. More likely to be perceived as intellectual, rational, systematic, emotionless, or impersonal.
Condemnatory	Expressing strong disapproval
Neutral	A neutral tone might refer to something unbiased and without a particular point of view (this, at least, is the writer's claim).
Very Upbeat	Passive, Exhilarated, Exuberant, Conciliatory

The sixty (60) press releases from three distinct communities were analyzed based on the framework of Scollon, where he investigated the tone of the English and Chinese news headlines using the following categorizations: committed, condemnatory, neutral, and very upbeat. A limited amount of literature determines the tone of written texts. Hence the tone categories are defined as (a) committed tone shows writers' reasoning and analytical attitude about things and is more likely to be perceived as intellectual, rational, systematic, emotionless, or impersonal; (b) condemnatory tone shows the expression of strong disapproval; (c) neutral tone shows unbiased without a particular point of view; and (d) very upbeat shows passiveness, exhilaration, exuberant, and conciliatory.

RESULTS AND DISCUSSION

The analysis of the data yielded several key findings, which are presented and discussed in this section.

Table 2. Press releases coming from the Press Centre of the Philippines, Thailand, and the USA

Philippine Headlines	Tone	Thailand Headlines	Tone	USA Headlines	Tone
1. Press release UNICEF Needs Your Help for Every Filipino Child's Future Gary V and Ryan Cayabyab Col- laborate for Basket of Hope 11 December 2020	Neutral	1. Thailand's national survey shows drop in adolescent birth rate, but worrying trend in child nutrition and secondary school drop-out 20 October 2020	Neutral	1. Almost 2 billion people depend on health care facilities without basic water services – WHO, UNICEF 14 December 2020	Very Upbeat

20. DOH, WHO, and UNICEF resume polio campaign 20 July 2020	Neutral	20. Globally, UNICEF is appealing for \$651.6 million to fight COVID-19 26 March 2020	Neutral	20. Severe pneumonia leaves 4.2 million children desperate for oxygen each year 12 November 2020	Very Upbeat

Table 2 shows the twenty 60 Press Release headlines with their analyzed tones from three different countries: the Philippines, Thailand, and the United States of America. The gathered headlines were from March 26, 2020, until the most recent, December 14, 2020.

Figure 1. Presentation of the Tone

Figure 1 presents the tone of the headlines of the press release from three different countries: the Philippines, Thailand, and the United States of America.

Tone in Philippine Headlines

Out of the 20 press releases coming from UNICEF Philippines, twelve (12) headlines are presented with a Committed tone, four (4) Neutral, four (4) Very upbeat, and zero (0) Condemnatory. A committed tone is very evident in the headlines of the Philippine Press release. Writers from the Philippines have a reasonable and analytical attitude in presenting their headlines. It can be analyzed in the presentation of the headlines that the writers are steadfast with the “standards” based on the news writing and what the organization aims to convey, which is likely to be perceived as intellectual, rational, systematic, emotionless, or impersonal. Philippine writings often emphasize community and interpersonal relationships, which can be reflected in the tone of the writing. According to Scroope (2017), Filipinos will try to express their opinions and ideas diplomatically and with humility to avoid appearing arrogant, and the tone varies widely by language, dialect, and region. Despite being a former colony of the United States, the Philippines has retained a unique version of English, hence the Philippine English (PE), which is heavily influenced by local languages, such as Tagalog, and the country’s culture and customs.

Tone in Thai Headlines

Thailand press release headlines, like the headlines from the Philippines, have Committed as the majority tone with ten (10) counts, followed by eight (8) for both neutral, two (2) very upbeat, and zero (0) condemnatory tones. Like the Philippines, headlines from Thailand are steadfast with the “standards” based on the news writing and what the organization aims to convey, which is likely to be perceived as intellectual, rational, systematic, emotionless, or impersonal. In journalistic writing, the tone can be more straightforward, but there is still an emphasis on politeness and respect. Writers often use language accessible to a broad audience, and there is a focus on presenting information in a balanced and unbiased way.

English in Thailand and the Philippines has a different history despite sharing the same region, South East Asia. English in Thailand has developed more slowly than varieties of English in post-British colonial countries, sometimes referred to as non-native varieties of English, according to Bennui and Hashim (2014). Thailand lacks colonial and postcolonial English history to compare to the Philippines. Nevertheless, due to globalization, the country’s educational system is improving its learners in the English language by hiring English teachers abroad.

Tone in American Headlines

The headlines of the press release from the United States of America were found to have eleven (11) neutral tones, followed by very upbeat (7), two (2) committed tones, and zero (0) condemnatory tones. In these headlines, the tone is often more informal and engaging, emphasizing storytelling and capturing the reader’s attention. Writers of the headlines from the USA use language accessible to a broad audience and strive to present information in a balanced and unbiased way. Hence, the writers aim to present their headlines with a neutral tone (11), using a voice or voices to present these in unbiased ways and writing without a particular point of view. Followed by seven (7) very upbeat, these headlines suggest passive, exhilarated, and exuberant attitudes. Unlike the first two countries, headlines from the USA have only two (2) committed tones and condemnatory has a zero count. It can be analyzed that among the three countries, the condemnatory tone has zero counts. None of these varied writers aims at presenting their headlines with an expression of strong disapproval.

CONCLUSION

For contrastive analysis, online press centers like UNICEF, which have affiliates in every nation, are a good source of corpora. With 60 online press release headlines, twenty (20) press release headlines with their tones analyzed came from three different nations: the Philippines, Thailand, and the United States of America. The most recent headlines, from December 14, 2020, were collected from March 26, 2020. These English-language texts, which take the form of press release headlines, will reveal information about the creativity and motivation of the authors in their choice of words when writing headlines, thereby bringing about a cultural pattern in writing. The authors of these texts come from various discourse communities and write for a specific audience. The headlines from the Philippines are analyzed for having a **committed tone**. Authors from this country present their headlines to their readers with a reasonable and analytical attitude. It can be concluded in the presentation of the headlines that the writers are steadfast with the “standards” based on the news writing and what the organization aims to convey, which is likely to be perceived as intellectual, rational, systematic, emotionless, or impersonal. Like the headlines from the Philippines, Thailand press release headlines have **committed** as the majority tone.

On the other hand, USA press releases have a neutral tone as the majority tone. The authors of the headlines from this country aim to present their headlines in a **neutral** tone, that is, to use a voice or voices and present these in unbiased ways and write without a particular point of view. Among the three countries, the **condemnatory** tone has zero counts. Therefore, none of these varied aims to present their headlines with an expression of strong disapproval and further suggests that these press releases express democratically.

TRANSLATIONAL RESEARCH

The findings of this study can help linguists and publishers make more informed and humanized decisions about how to analyze culturally-specific words and expressions, hence the tone, in literary texts to maximize their reception in different target cultures, especially in the emergence of Artificial Intelligence (AI) and Natural Language Processing (NLP). The study also highlights the need for further research in this area to better understand the impact of contrastive strategies on the reception of literary texts and other genres in different target cultures in identifying the tone of a text. Moreover, the results of this study could provide insights into how cultural context influences language use in

press release headlines. These findings could have implications for cross-cultural communication and the development of effective communication strategies in different cultural contexts.
