

Book presentation:
Atlas of CT Angiography

Gratian Dragoslav Miclaus, Horia Ples

Springer International Publishing, 2014

The "Atlas of CT Angiography" by Romanian authors Gratian Miclaus and Horia Ples published by Springer International Publishing, 2014 is an editorial event based on the professional value of the authors.

The two first chapters - Cerebral Angiography and Carotid Angiography show the most important cranio-cerebral and cervical lesions. The images are significant and very good, authors used the subtraction of the bone, allowing the evaluation of the arterial cerebral circulation, without the presence of the bony structures. Also, the authors make use of the 3D VRT reconstructions without the bone subtraction, for the optimal planning of the craniotomies.

This book is a success of the team of neurosurgeons and neuroradiologists from Timisoara and naturally for Romania.
