Editorial

The contributions assembled in this Special Volume have been selected from a large number of contributions to the International Seminar and Workshop on Public Health Action (ISWOPHA) 2021, organized by the Department of Public Health, Faculty of Health Science, Universitas Dian Nuswantoro, Semarang, Indonesia.

The important issues treated range from juridical questions around patient records - subject of the developing legislation - to adolescent pregnancies in Nepal and reproductive health literacy, deal with Diabetes mellitus and Tuberculosis, investigate farmers handling pesticides, and last but not least argue for health protocols at the workplace, urgent in the pandemic situation of today.

In the present global situation, we, the workshop organizers, want to underline the essential role of digital health together with improved health literacy. Digital technology has the potential to unlock capacities otherwise sealed off, especially in the developing world. The digitalization of our world, however, looks like a two-sided coin: first, reaching the marginalized with essential information on how to protect is an extremely valuable achievement; second, the net also carries infodemic and even purposely wrong information not discernible by the recipients.

Hopefully, the findings published here will be used to generate better public health policy and better health care resulting in a higher quality of human life. The selected eight contributions of our young scientists demonstrate convincingly: Indonesia is on the move.
